EDUCATION

B.Tech | Computer Science and Engineering (2019-23)   July 2019 – present
Dr. B. R. Ambedkar National Institute of Technology, Jalandhar

PROJECTS

VOTERS' VOTE | JS, HTML, SOLIDITY   (https://enjae.github.io/Voters_vote/)

This is a Voting app which is backed by blockchain and records each vote made by a voter without double voting.
The voters are given Unique address to cast votes After that, users use their ethereum wallet account address to submit votes, during which the application checks to see if the user with this address has voted before. If this particular address has not been used before, the vote goes through the contract and the vote count is updated

EtHIT | JAVASCRIPT, INFURA   (https://enjae.github.io/ethe_scan/)

etheIT is a Block Explorer and Analytics Platform for Ethereum, a decentralized smart contracts platform just like Etherscan
It allows use-rs to view information about the latest block, current gas price, and difficulty.
This system taps into the ethereum mainnet and fetches you the information about which blocks are deployed.

DINO-RUN | C++   (https://github.com/enjae/Dino-Game)

Dino Run is a C++ game in which the player guides a pixelated T-rex across a side-scrolling land-scape, avoiding obstacles to achieve a higher score..

FLYNN | PYTHON   (https://github.com/enjae/personal-assistant)

My personal assistant or Flynn as I would like to call him, is one of the python projects that I made.
It is focused to automate my system to listen to my voice commands and do the said operations.
It can search for wikipedia, youtube, open the app I ask it to etc
